**Abstract.** Significantly changes the modern public relations, the rapid development of a variety of telecommunications networks, including the global Internet. Information technology has a significant impact on the social processes, implementing the achievements of information activity not only of society, but also of the state. This leads to social relations acquire an electronic form. In the last time, many countries, including Russia, include their task transition to electronic forms of management, which are necessary in the information society. Creation of the newest developments in the field of information technologies is the most important strategic direction of state policy. The current state of the state and law are in a difficult and unclear interconnection with the processes of modernization in the country, processes wide introduction and use of the latest information technologies. Problems of interrelation of legal culture and information technologies were repeatedly raised in the works of Russian scientists - jurists.

**Keywords:** Information technologies, Internet, legal consciousness, legal culture.

## 1. INTRODUCTION

The legal culture of today is different from the one that was before. The social life, social, economic, political conditions are changing. Problems of further development of culture, including have a special significance. Thus, information technologies are gradually becoming an important factor affecting the legal consciousness.

Legal awareness is a system of ideas, theories, ideas, feelings that is dynamically developing under the influence of the information society, habits of law, legal validity on the basis of information, received in the majority by means of information technologies, and values, legal guidelines designed to regulate human behavior in legally significant situations.

Based on these judgments, the definition of information technology is formulated.

Information technology is a combination of the processes of influencing information, tools for obtaining various information based on the achievements of modern computer technology and means of communication, as well as the way of interaction between people of modern society, the way of joint decision-making and the birth of new knowledge, the creation of legislation, the development of the legal system of the state in general, and the way to influence the consciousness, and consequently, its component of the sense of justice.

Thanks to the transition to the information society, new opportunities arose associated with the rapid development and modernization of various areas of information technology, such as: the Internet, mobile technologies, various specialized programs, databases and data banks, analytical and expert systems, etc.

## 2. STATEMENT OF THE PROBLEM

Information technologies for the modern person, the carrier of traditional sense of justice, become the main source of information about the law and legal activity, which he

receives from the reference legal systems, official websites of public authorities, specialized legal portals, individual legal Web sites, etc.

Thanks to this information, legal directions are expressed, establishes legal goals and forms practical activities in the legal sphere.

A person, with extensive access to various information, can It is faster to estimate the received data and to make the most correct decision, predicting the consequences of their actions.

A step in the development of modern civilization is the information society, characterized by increasing the role of information and knowledge in the life of the state, the growth of information and communication technologies, formation of a global information system that provides effective information communication of people, which provides necessary information to meet their social and personal needs in information products and services.

The technology base of the information society is global telecommunication networks. The Internet is the largest in the world telecommunications network, which arose as a means of communication for a narrow circle of specialists, but very quickly turned into a mass phenomenon.

Currently, the Internet is an international technological a public information system intended for the exchange of information.

Improvement of legal culture is associated with the process offunctioning of the Internet as a source of legal information, forming a mutual connection between the state, organizations and society.

The influence of the Internet on the sense of justice is an inherent part of structure of legal culture, both the whole society and the individual in the isolation.

The process of formation of the concept of a law-governed state collides with a complex of

problems related to legal awareness, legal consciousness of a person, social and legal activity, which is legal installation, which is a mechanism of active, activity reflection of the surrounding reality.

Internet as a public telecommunications network is

effective means of realizing the creative role of law and enables more full use by citizens of their democratic rights and freedom.

In addition, being a representative of legal socialization, the Internet has the potential to develop respect for the law, develop legal thinking, form a legal culture and to provide socially active behavior in the legal sphere.

Information exchange through the Internet represents unity of activity, communication and knowledge. It is also necessary to pay attention to the legal education the younger generation using information technology.

### **3. DISCUSSION**

Young people spend most of their time using various computer devices and global telecommunications networks, which includes the Internet.

In this regard, information technology provides the most productive method of influencing the formation of consciousness of the young generation, its main part - the sense of justice.

Creation of clear guidelines for lawful behavior, using the method, which will be understandable and accessible to the younger generation.

To implement this method, you need to connect specialists from the field of informatics, law, psychology and pedagogy. It is necessary to create and modernize legal education Internet resources to develop various educational computer programs affecting the whole of society, namely young generation, who actively use information technologies.

Law students who study the legal disciplines in various educational institutions, belong to a

special group of bearers of legal consciousness. Its peculiarity lies in the fact that it stands on the boundary between the carriers traditional legal conscience and in the process of group of bearers of professional consciousness.

In connection with the change in the state-legal system, significantly changed the right of our country, development of public relations in the information sphere, development and the improvement of information technology is much faster, than the development of legal norms that regulate the information sphere.

As a consequence, there is a need to form a legal the consciousness of students who correctly perceive changes, aimed at creating an information society. And this is paramount the task of forming the legal consciousness of a modern lawyer.

Proclamation in the Russian Federation of the development of information society and, as a result, the process of active implementation information and telecommunication technologies, which are an instrument of reflection of reality, has some negative influence on the legal culture.

The negative side is that the information technologies were actively used by representatives of the criminal circle to commit various crimes, involving in their activities new members of modern society. To somehow reduce the level of influence adverse factors that cause distortion of sense of justice, it is necessary to strengthen state control over the distribution of socially dangerous information in information technology. Despite that the state has made attempts to strengthen control over the dissemination of socially dangerous information, this issue remains relevant.

### **4. CONCLUSION**

Summing up, we can say that the formation of new public relations that arise in the relationship with information technologies, leads to the improvement of modern legal culture.

Acting as a source of bilateral contact between society and state, information technologies inform the public and the activities of political and legal institutions, power structures about life society and its reaction to their actions.

Information technologies are the most effective method of influencing the formation of the right education of the younger generation.

When introducing information technologies in the teaching process legal disciplines improve the quality of legal education and level of legal awareness of students.

It is necessary to understand exactly what is a reflection of real life, information technology can have a devastating impact on legal culture.

Developments and applications of information technology, create suitable conditions for the participation of citizens in the law-making process,

management of affairs of the state, fill the really important and actual legal information with the Russian information space, improve the psychological mood in society, help raise really active citizens of their country with a high level of legal awareness and legal culture.
